Where are the opportunities in telemedicine? Find out in the all-new edition of this essential planning tool.

Telemedicine Research Center

The new edition of the most widely used and respected research tool in the field provides the only comprehensive overview of telemedicine activity in the U.S., including what specialties and services are most provided via telemedicine, what telecommunications services and technology are being used, how many teleconsultations are provided annually, and who is doing them.

For those just starting a program…the 2004 TRC Report’s interpretative analysis of key trends and data help you understand the issues driving telemedicine today and get help in planning.

For decision-makers seeking to optimize an existing program…the 2004 TRC Report provides needed benchmark information on how their program or activity relates to other programs.

For everyone involved in telemedicine…the 2004 TRC Report serves as an up-to-date directory of contacts—with information on 88 networks in the U.S. and 54 non-U.S. programs in 20 countries—allowing users to communicate with others in the field for networking and assistance with problems.

ORDER YOUR 2004 EDITION NOW!

2004 TRC Report on US Telemedicine Activity is published by Civic Research Institute, Inc., an independent publisher of reference materials for practicing professionals. Note: If order form is missing, write Civic Research Institute, 4478 US Route 27, PO Box 585, Kingston NJ 08528 or call 609-683-4450 to order. Or visit our web site at www.civicresearchinstitute.com.
The new edition of the industry’s premier strategic reference and planning tool...

Compiled and analyzed by America’s only research center devoted exclusively to telemedicine, the brand new 2004 TRC Report on US Telemedicine Activity is your guide to the current state of telemedicine programs, applications, demographics, technology, and economics in the U.S. and around the world...

- Identify the major telemedicine programs active today. The 2004 report profiles 88 U.S. networks and 54 non-U.S. programs in 20 countries—including key decision makers and contact information

- Establish benchmarks for successful networks. Discover how the best-run networks operate—what clinical and related services they provide, what delivery technologies they employ, and program statistics on sites, consultations, funding sources, and much more

- Survey the state-of-the-art in telemedicine technology—including interactive video, audiographic technologies, store-and-forward, and telemetry
Turn to the brand new 2004 TRC Report on US Telemedicine Activity for comprehensive facts and figures for over 140 active telemedicine programs in the U.S. and around the world...plus exclusive research on industry-wide economic, program, and clinical usage data.

Where are the opportunities in telemedicine? Find out in the all-new edition of this essential planning tool for telemedicine administrators, directors, and service providers.... The 2004 TRC Report on US Telemedicine Activity is an essential desktop reference for every telehealth executive and administrator—and for health care providers, hospital administrators, legislators and policy makers, attorneys, health services researchers, and professionals in home health agencies, medical schools, government agencies, insurance companies and e-health firms who want to succeed in telehealth. Designed for quick reference to important facts, trends, and key industry data, the report provides a thorough interpretation and analysis of survey results from over 140 responding telemedicine programs, supported by nearly 90 tables and figures. Feedback from previous edition users suggests the report is widely used to identify new market opportunities and potential collaborators, provide industry benchmarks, assist in grant writing, anticipate future industry trends and enlighten telemedicine-related policy making and legislative processes.

Use the 2004 TRC Report to ...

- Expand your network and find new partners
- Set goals and standards for performance
- Evaluate your current portfolio of services and identify new opportunities
- Measure your program's design and operation against the best programs in the United States and around the world
- Support your strategic and business planning with authoritative statistical data

2004 TRC Report on US Telemedicine Activity
With An Overview of Non-US Activity

Designed, Compiled and Edited by
The Telemedicine Research Center
Analysis by Bill Grigsby, PhD

Subscription Information

The authoritative sourcebook that exclusively profiles over 140 leading telemedicine networks in the US and abroad—including key decision makers, technology, and services

For Hospital and Medical Center-based physicians, nurses, program coordinators, administrators, medical directors managing a telemedicine program or seeking to establish one, the 2004 TRC Report provides an unparalleled networking tool for contacting other programs as well as a comprehensive review of the clinical services now being provided via telemedicine, including what specialties are most successful and cost-effective, and what technology is being used.

Rural Clinics and Small Hospital-based physicians, nurses, and administrators will find direct access to the major medical centers providing telemedicine services—the kinds of services being provided, the technology being used, and the barriers and issues encountered by those who have been practicing telemedicine.

Telemedicine Technology Vendors will find an overview of telemedicine activity in the US and abroad with special insight on where the market is heaviest, where there is room for expansion, and who the best potential customers are.

Corrections Administrators and Correctional Health Care Providers. Data on programs providing health care services to corrections facilities shows this to be one of the most stable markets in telemedicine—and one with potential for even more growth. For those interested in expanding an existing program or developing a new one, the 2004 TRC Report provides key benchmarks and contacts.

Medical Libraries. You’ll find an up-to-date overview of telemedicine. Almost every major medical center in the US has some sort of telemedicine activity. Libraries at those medical centers need to support those programs by providing information on telemedicine. The report provides an overview of telemedicine not commonly available elsewhere.

Grant Funding Providers. Agencies providing grant funding for telemedicine programs will find solid data on what programs are currently doing to support decisions about which sectors of telemedicine will benefit the most from funding.
I. INTRODUCTION
Sampling and methods

II. GROWTH AND DISTRIBUTION OF ACTIVITY IN THE TELEMEDICINE SECTOR
Overall growth
Distribution of growth
Prospects for sustainability

III. NETWORK DEMOGRAPHICS

IV. NETWORK USE
Clinical use
Non-clinical use

V. TECHNOLOGY
Delivery modes
Equipment
Telecommunications

VI. DISCUSSION
Is telehealth growing?
Speculation on key barriers
Telehealth politics
Research questions

VII. REFERENCES

VIII. NON-US NETWORKS
Telehealth Activity in Australia
Canada’s E-Health/Telehealth Environment – An Update
Recent Telemedicine And E-health Activity In The UK

IX. APPENDICES
Appendix A1: Survey Form for US Respondents
Appendix A2: Survey Form for Non-US Respondents
Appendix B: Specialty-specific Tables
Appendix C: Miscellaneous Tables
Appendix D: Non-US Tables
Appendix E: General Reference Table for all Non-US Networks
Appendix F: Contact Information for Non-US Networks
Appendix G: General Reference Table for all US Networks
Appendix H: Contact Information for US Networks

LIST OF TABLES
Sample and Response
Table 1.1. Sample and response over time

About the TRC
The Telemedicine Research Center (http://trc.telemed.org) is a non-profit research organization founded in 1994 in Portland, Oregon. The TRC’s mission is to promote telemedicine research and to create, manage, and disseminate information about telemedicine-related issues. Its main product is the Telemedicine Information Exchange (TIE) at http://tie.telemed.org, a comprehensive resource on telemedicine and telehealth. The TIE’s Program section has tracked telemedicine activity since 1995. The Program survey was revised in Spring 2003, and the data received from April–December 2003 are the basis of this report.

About the Author
Bill Grigsby, PhD, is Associate Professor in Sociology at Eastern Oregon University in La Grande, Oregon. Dr. Grigsby was Senior Research Associate at the Telemedicine Research Center from 1996–2000, and authored the 1997, 1998, and 2000 ATSP Report on US Telemedicine Activity.
